

PATCH In

Compact Pedalboard Patch-bay / Insert Point

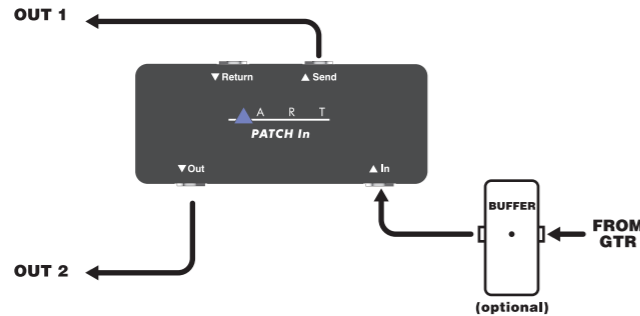

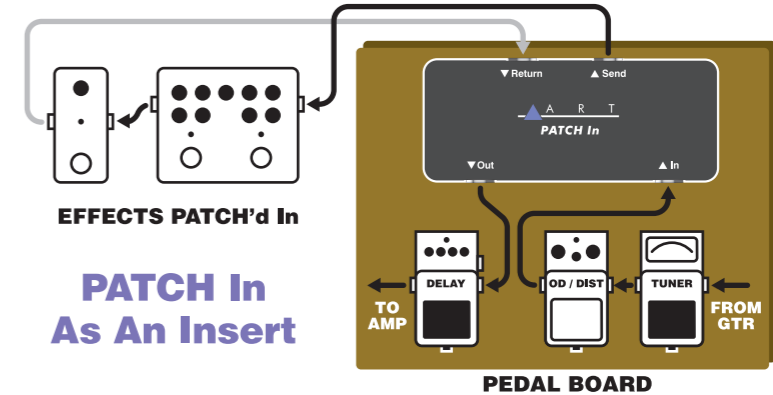

artproaudio.com

PATCH In

Operation - When nothing is connected to the "Return" jack of the PATCH In, the "In" jack is connected to both the "Send" and "Out" jacks. When something is plugged into the return jack, the "In" jack connects to the "Send" jack, and the "Return" jack is connected to the "Out" jack. This enables several useful functions including:

- Inserting additional effects mid-stream on a pedalboard
- Signal splitting to send your signal to two different amps (or anywhere else, for that matter)
- Setting up a large pedalboard for use in a pre/post configuration when an amp has an effects loop (using the four-cable method), or in an all-pre configuration when no effects loop is available.
- As a simple patch bay to route pedalboard input and output to a single, convenient, easily accessible location on the board.

Power - The PATCH In is a fully passive device, and does not require a power source.

PATCH In As a Splitter

Limited Warranty (USA only)

Applied Research and Technology will provide warranty and service for this unit in accordance with the following warrants: Applied Research and Technology, (A R T) warrants to the original purchaser that this product and the components thereof will be free from defects in workmanship and materials for a period of three years from the date of purchase.
